Risk and reward profile

Risk Disclaimer

- The risk and reward indicator illustrates where the sub-fund is positioned in terms of its possible risks relative to its potential rewards. The higher the sub-fund's position on this scale, the greater the possible reward, but also the greater risk of losing money. Due to a lack of historical data, the risk indicator is calculated using synthetic historical data, which cannot be used as a prediction for the future. Therefore the risk classification may change over time. Even if the sub-fund is in the lowest risk class you can lose money, as no investments are entirely risk free.

Why is this Sub-Fund in this category?

The sub-fund is exposed to different asset classes. The risk category is driven by interest rate, credit spreads, or equity market fluctuations.

Not all risks affecting the sub-fund are adequately captured by the synthetic risk indicator. The following risks may affect the sub-fund:

- Corporate bonds are usually considered as carrying significant credit risk.
- A significant portion of the sub-fund could be invested in less liquid instruments whose prices could fluctuate in certain market conditions.
- The use of over-the-counter instruments may expose the fund to counterparty default risk.
- The use of derivatives to generate leverage could impact fund returns.
- No capital guarantee exists for this product so investors can lose the whole of their investment.
